

Financial services Decision Authorization

Representative case from the September 17, 2026 controlled evidence set.

What the buyer inspects: exact proposed action, standing, frozen authorization input, Decision API result, release state, and whether a protected effect formed.

This event: Decision ESCALATE. Intent alignment computed and included in the authorization basis. Benchmark figures are run-specific diagnostics and are not authorization.

What this is not: not a customer production transaction, not L5, not hardware attestation, not AgenTrust TRACE unless separately evidenced on the AgenTrust page.

Current product line: Headless Decision Authorization Runtime 1.2.21. This one-pager summarizes a September 17 controlled evidence event and does not imply that event was executed under the current runtime release unless separately stated. Governance Pack v1.2.0 remains a separate artifact/schema line.
