

OntoGuard Boundary Proof Kit v4

Public Sanitized - Governed Transaction, Decision Authorization, and Proof

Protected by U.S. Patent Application 19/444,521 - Track I prioritized examination granted May 2026.

OntoGuard governs the complete event where an AI output or proposed action attempts to become an organizational commitment.

Governed Event Lifecycle - Current Financial-Services Proof Case

1. Attempt COMPLETE AI-generated Investment Management portfolio construction recommendation governance withheld...	2. Interpretation COMPLETE Investment Management portfolio construction recommendation governance	3. Admissibility REVIEW REQUIRED Explains whether the proposed movement was admissible for autonomous release or required rev...	4. Authorization ESCALATE Decision API result: ESCALATE
5. Release Control WITHHELD Release authorized=False; routed_to=HUMAN_REVIEW	6. Consequence Proof NO EFFECT FORMED Autonomous release was withheld before downstream protected effect formation.	7. Human Closure PENDING Shows whether the human-review route is open, pending, or closed by an actual reviewer outcome.	8. Learning Signal CANDIDATE Buyer-visible L3 candidate only; no training, weight update, ontology mutation, policy mutat...

What the AI tried to do	AI-generated Investment Management portfolio construction recommendation governance withheld pending governed review
Decision Authorization	ESCALATE
Release Control	WITHHELD_PENDING_REVIEW
Consequence Proof	NO_PROTECTED_EFFECT_FORMED
Human Closure	PENDING
Learning Signal	CANDIDATE_GENERATED
Benchmark	17th percentile / 50 required; internal synthetic 2026 OntoGuard reference
Route boundary	L1_PLUS_EVENT_GOVERNED_NO_BIND_PARTIAL; production enforcement asserted=False

CONTROL Permission to move, stop, or escalate	PROOF Verifiable record of attempt, decision, and consequence	LEARNING Review-gated improvement candidate
---	---	---

Verification snapshot

- Single-run post-harness: 6748 passes, 0 warnings, 0 failures.
- Controlled-batch post-harness: 1962 passes, 0 warnings, 0 failures.
- Both source packages contain the exact strict-six artifact set.
- The DAP lifecycle is canonical, derived-only, and does not mutate Decision API or release truth.

Public boundary: event-level/no-bind proof is shown. Production L5 route non-bypassability requires customer route integration and production topology evidence.

1. Execution Boundary + No-Bind Proof

This page shows what moved, where OntoGuard intervened, what was refused, and what consequence did not form.

Attempted movement	AI_OUTPUT_RELEASE
Movement description	AI-generated output attempted to move toward reviewer/customer-facing release.
Control point	DIRECT_BACKEND_GOVERNANCE
Gate mode	SHADOW_MODE
Gate invoked before release	True
Decision	ESCALATE
Release status	WITHHELD_PENDING_REVIEW
Refused operation	AUTONOMOUS_OUTPUT_RELEASE
Authorization token issued	False
Downstream commit status	NOT_COMMITTED
Protected effect formed	False
No-bind status	NO_PROTECTED_EFFECT_FORMED

Why this matters

- A plausible AI output did not automatically become an enterprise action.
- The authoritative Decision API returned ESCALATE and release was withheld.
- The packet records that no protected downstream effect formed.
- The no-bind receipt binds the decision, evidence, output, and manifest hashes.

Attached limitations

- ROUTE_INVENTORY_NOT_ATTACHED
- SHADOW_MODE_DOES_NOT_ASSERT_PRODUCTION_ENFORCEMENT
- DOWNSTREAM_RELEASE_ENDPOINT_NOT_ATTACHED

No-bind receipt hash posture

Receipt ID	receipt_a6f03f1bc8bdab8d
Decision API hash	07aa43e874dae81e41e7a01d68f2d8c2271c7872d8cd877022804adc090a436b
Evidence pack hash	4d8828f73b9a1a5ec08ebbb882dc91a521963b174f6902602f5b14b0c9402f12
Manifest hash	020132d0821cc0a83b3769d9b0d2ac3b2732535e72e379248baebee3c523d3c4
Source output hash	6eedaaf42bfc4f07faeb4b56bc89460e9027231d107659fae5dd97edcaed0172

2. Admissibility, Benchmark Identity, and Route Maturity

The Decision API action is authoritative. Admissibility, benchmark context, and route maturity explain why autonomous release was not authorized.

Institutional admissibility

Status	INADMISSIBLE_FOR_AUTONOMOUS_RELEASE_PENDING_REVIEW
Evidence sufficiency	PARTIAL
Policy fit	PASS
Delegated authority	NOT_ATTACHED
Semantic constraint status	PARTIAL
Semantic constraint authority	NOT_ATTACHED
Route authority	L1_PLUS_EVENT_GOVERNED_NO_BIND_PARTIAL
Uncertainty posture	MATERIAL_UNCERTAINTY_REMAINS
Human review requirement	REQUIRED
Outcome closure	PENDING_HUMAN_REVIEW_OUTCOME

Benchmark identity - explicit and consistent

Mode	INTERNAL_ONTOGUARD_REFERENCE_CORPUS
Percentile	17 / 50 required
Peer group	investment_management_governance
Sample size	150
Corpus origin	INTERNAL_ONTOGUARD_SYNTHETIC_REFERENCE
Synthetic reference corpus	True
Customer production data	False
Customer-specific baseline	False
External industry benchmark	False

Synthetic 2026 OntoGuard reference corpus generated from public regulatory/control expectations and internal scenario templates; not customer production data and not an external industry benchmark.

Route maturity boundary

Route maturity	L1_PLUS_EVENT_GOVERNED_NO_BIND_PARTIAL
Route completeness	L1_EVENT_GOVERNED_NO_BIND_PARTIAL
Governed	True
Tested / replayable	PARTIAL_PROOF_HARNESS_ONLY / PARTIAL
Fail closed	True
Non-bypassable	NOT_ASSERTED_IN_SHADOW_MODE
Outcome accounted	PENDING_HUMAN_REVIEW_OUTCOME
Production enforcement asserted	False

3. Batch DAP / Controlled Corridor Mode

The aggregate packet preserves mixed case outcomes while normalizing every visible case Decision API mirror to the authoritative case result.

1. Attempt COMPLETE 4 governed case movement(s) evaluated before aggregate release	2. Interpretation COMPLETE Per-case semantic and governance snapshots were aggregated	3. Admissibility MIXED / REVIEW Aggregate decision admissibility summarizes which controlled-corridor cases were allowed, bl...	4. Authorization BLOCK Aggregate Decision API result: BLOCK
5. Release Control WITHHELD Release authorized=False; routed_to=HUMAN_REVIEW	6. Consequence Proof NO EFFECT FORMED Case-level protected-effect outcomes are bound to the aggregate packet	7. Human Closure PENDING Reviewer outcome remains pending	8. Learning Signal CANDIDATE Review-gated improvement candidate attached

Batch ID	corr_batch_af700a1eb8c1
Aggregate action	BLOCK
Case count	4
Decision mix	ALLOW=1 BLOCK=1 ESCALATE=2
Release status	WITHHELD_PENDING_REVIEW
Production enforcement asserted	False

case_001	Finance / investment and lending recommendation authorization	ESCALATE	WITHHELD_PENDING_REVIEW	MATCHED
case_002	Finance / internal advisor preparation summary	ALLOW	AUTHORIZED_INTERNAL_ONLY	STALE_SOURCE_QUARANTINED
case_003	Healthcare / mental health clinical support authorization	BLOCK	BLOCKED	STALE_SOURCE_QUARANTINED
case_004	Healthcare / clinician-facing intake summarization	ESCALATE	WITHHELD_PENDING_REVIEW	MATCHED

Case decision authority

- ALLOW case visible decision_api.action = ALLOW.
- BLOCK case visible decision_api.action = BLOCK.
- Two stale incoming ESCALATE mirrors were quarantined and removed from buyer-visible authority.
- Case objects remain non-formal projections; the aggregate Batch DAP and per-case runtime snapshots retain authority.
- Raw stale input is preserved only in full-audit forensics and excluded from case decision hashes.

4. Strict-Six Offline Audit Credential

The proof package is buyer-readable, machine-readable, and internally hash-bound without claiming external signature verification.

buyer_portable.governance.json	Buyer-facing machine-readable packet
full_audit.governance.json	Full audit detail and per-case depth
governance.pdf	Full buyer/auditor PDF
governance.sellable_lite.pdf	Executive buyer PDF
decision_receipt.json	Decision and artifact hash receipt
artifact_manifest.json	Package inventory and byte hashes

Current verification

Single harness	6748 passes; 0 warnings; 0 failures
Batch harness	1962 passes; 0 warnings; 0 failures
Single audit credential	UNSIGNED_OFFLINE_ANCHOR
Single integrity status	HASHES_PRESENT_AND_INTERNALLY_CONSISTENT
External signature	UNSIGNED_KEY_NOT_CONFIGURED
Batch verification	OFFLINE_VERIFIABLE_WITH_SELF_EXCLUDED_CREDENTIAL_BASIS
Batch hash reconciliation	PASS_AFTER_FINAL_PDF_RERENDER_SELF_EXCLUDED_CREDENTIAL_BASIS

Credential meaning

- Hashes and manifest relationships can be checked offline.
- The current single-run credential is unsigned because an external signing key is not configured.
- The batch credential uses an explicit self-excluded hash basis to avoid circular self-hashing.
- This public kit is sanitized; private source strict-six artifacts remain the authoritative full proof packages.

5. Projection, Human Closure, and Learning Signal

These layers explain the decision and convert governed review into a future improvement candidate without changing the original authorization result.

Semantic projection and Decision API parity

Selected projection	ESCALATE
Decision API action	ESCALATE
Decision API parity	MATCH
Underlying score preference divergence	True
Highest-scoring candidate	ALLOW
Override performed	False
Projection confidence	0.578354268
Projection margin	0.0

Coherent Governance Loading

Score	0.38745000000000007
Tier	WEAK
Release threshold met	False
Weakest components	evidence_coverage, citation_linkage, human_judgment_readiness
Missing components	evidence_pack, citation_linkage

Human closure

Review task	REQUIRED
Owner role	Compliance / Risk / Product Owner
Review options	APPROVE, REVISE, BLOCK, REPLACE_WITH_SAFE_TEMPLATE, REQUEST_MORE_EVIDENCE
Human review status	PENDING_HUMAN_REVIEW
Outcome closure	PENDING_HUMAN_REVIEW_OUTCOME

Learning signal

Repair status	PENDING_REVIEW
Repair required	True
Candidate type	HUMAN_REVIEW_CANDIDATE
Export status	PENDING_REVIEW
Human acceptance required	
Live training performed	False
Model updated	False
Ontology mutated	False
