

OntoGuard Decision Authorization Packet - Sellable Lite v4

Public Sanitized | Financial-services governed event | Buyer-readable proof before consequence

Protected by U.S. Patent Application 19/444,521 - Track I prioritized examination granted May 2026.

OntoGuard governs the transaction through which this AI output attempted to become a business consequence.

What buyers can inspect

- Canonical eight-stage governed-event lifecycle.
- Decision API action, release status, execution-boundary trace, and no-bind receipt.
- Institutional admissibility, human-review status, and route-maturity boundary.
- Internal synthetic 2026 benchmark disclosure: 17th percentile / 50 required, n=150.
- Strict-six JSON/PDF/receipt/manifest package with offline hash posture.
- Controlled batch: 1 ALLOW, 1 BLOCK, 2 ESCALATE; stale case mirrors quarantined.

Current limitation

Event-level/no-bind proof is shown. Production L5 route non-bypassability requires customer route integration, endpoint enforcement evidence, bypass rejection, replay records, and outcome closure. Learning output is candidate-only and review-gated.
