

OntoGuard Layer Facts Brief v4

Public-safe explanation of the current proof surface

Protected by U.S. Patent Application 19/444,521 - Track I prioritized examination granted May 2026.

Layer 1 - Attempted Movement

Identifies the proposed business movement, source state, target state, affected objects, release surface, materiality, reversibility, and authorization requirement.

Layer 2 - Semantic Interpretation

Translates the AI output into current-run business meaning using the semantic state snapshot and open-world scope.

Layer 3 - Institutional Admissibility

Tests evidence sufficiency, policy fit, authority, uncertainty, route posture, and whether human judgment is required.

Layer 4 - Decision Authorization + Release Control

Returns ALLOW, BLOCK, or ESCALATE and binds the authoritative action to release authorization, status, and routing.

Layer 5 - Consequence Proof + Human Closure

Records refused operation, token state, downstream commitment, protected-effect status, no-bind proof, reviewer route, and outcome closure.

Layer 6 - Batch DAP + Governed Learning

Aggregates controlled cases while preserving per-case decisions and exports review-gated repair/training candidates without runtime mutation.

**Boundary statement: The public kit proves controlled event-level/no-bind and controlled-batch DAP behavior.
Production L5 non-bypassability is not asserted without production route evidence.**
