

OntoGuard Layer Facts Brief

Public-safe explanation of the current Goal 3 Decision Authorization architecture and evidence boundary.

Protected by U.S. Patent Application 19/444,521 - Track I prioritized examination granted May 2026.

What OntoGuard Governs

1. Movement + Intent

Identifies the exact proposed state transition and preserves one immutable original mission. R7 measures continuing semantic alignment before the authoritative decision.

2. Governing Basis + Authority

Tracks whether authority, policy, semantic constraints, route, knowledge/evidence requirements, source authority, capability authority, runtime basis, and consequence conditions remain current. Lawful Continuation never means pre-authorized.

3. Decision Authorization

The Decision API alone returns ALLOW, BLOCK, or ESCALATE and binds release authorization, status, routing, evidence posture, and reasons.

4. Custody + Consequence

Separates provenance, integrity, and evidence custody, then binds the exact movement through governing basis and frozen input to execution-boundary grant or NO-BIND proof.

5. Controlled Full Seam

A separate controlled fixture passed 22/22 mandatory tests and reached L4_ROUTE_ENFORCED for its bounded controlled route. This is not customer-production L5 evidence.

6. Longitudinal Learning

Semantic Curvature and Governance Spectrum analyze comparable finalized history without changing the current decision. Governed learning exports review-gated candidates only; no live model or policy mutation occurs.

Current accepted proof

Goal 3 code-now	COMPLETE - 15/15
Single harness	7373 / 0 / 0
Batch harness	2221 / 0 / 0
Current event	Event-governed/no-bind; production route completeness not asserted
Controlled fixture	PASS - L4_ROUTE_ENFORCED - 22/22
Production L5	Requires customer topology evidence

The remaining production evidence is external to the code-now acceptance program: real route inventory and endpoint enforcement, production bypass/replay evidence, authorized reviewer/outcome closure, deployment controls, customer authority ownership, and measured customer baselines.
