

OntoGuard Decision Authorization Packet - Public Sanitized

Latest accepted controlled proof surface - complete Goal 3 code-now context, R7, continuity, authority, custody, consequence proof, and controlled Full Seam L4 evidence.

Decision Authorization Summary

Trace ID	83b5bdd9-7b5f-40c1-9e34-75573e0aac54
Business domain	Investment Management
Workflow	Pre release investment recommendation review
Decision API	ESCALATE
Release authorized	False
Release status	WITHHELD_PENDING_REVIEW
Routed to	HUMAN_REVIEW
Gate mode	Not attached / not applicable
Downstream commit	NOT_COMMITTED
Protected effect formed	False

Goal 3 code-now implementation: COMPLETE (15/15). Current event proof remains event-level/shadow. Separately, the controlled Full Seam passed 22/22 at L4_ROUTE_ENFORCED for the bounded controlled route. Production L5 is not asserted.

Eight-Stage Governed Transaction

- 1. Attempt - COMPLETE
- 2. Interpretation - SNAPSHOT_CAPTURED
- 3. Admissibility - INADMISSIBLE_FOR_AUTONOMOUS_RELEASE_PENDING_REVIEW
- 4. Authorization - ESCALATE
- 5. Release Control - WITHHELD_PENDING_REVIEW
- 6. Consequence Proof - NO_PROTECTED_EFFECT_FORMED
- 7. Human Closure - PENDING_AUTHORIZED_REVIEW
- 8. Learning Signal - REVIEW_GATED_CANDIDATE

Intent, Governing Basis, Authority and Custody

R7 Intent Horizon

Status	COMPUTED
Decision role	DECISION_DRIVING_INTENT_ALIGNMENT
Semantic distance	0.331311
Similarity	0.668689
Threshold	WARNING_THRESHOLD_EXCEEDED
Required effect	ALERT
Prohibited boundary crossed	False

Governing Basis Continuity

Status	ESTABLISHED_CURRENT
Decision role	DECISION_DRIVING_GOVERNING_BASIS_CONTINUITY
Basis changed	False
Continuation state	Not attached / not applicable
Fresh decision required	True
Rebind / revalidation	False / False

Authority and custody

Authority completeness: None. Retrieval Source Authority and Tool Capability Authority preserve the rule that available/retrievable/callable is not equivalent to authorized. Evidence custody is separately typed. External runtime-state attestation is NOT_ATTACHED for this event and cannot independently authorize release.

Consequence Custody and Maturity Separation

Consequence custody	NO_BIND_PROVEN
Decision	ESCALATE
Release authorized	False
Release status	WITHHELD_PENDING_REVIEW
Bind-time status	LIMITATION_NOT_ENFORCEMENT_CAPABLE
Production non-bypassability	False

Evidence layer	Status	What it proves
Current event	EVENT_GOVERNED_ROUTE_COMPLETENESS_NOT_ASSERTED	Event-level Decision Authorization and no-bind proof; production route completeness not asserted.
Controlled fixture	L4_ROUTE_ENFORCED	Bounded controlled route enforcement; 22/22 tests.
Production L5	NOT_ASSERTED	Requires customer production topology and endpoint evidence.

Consequence Custody binds the exact proposed movement -> governing basis -> frozen decision input -> Decision API result -> execution boundary -> NO-BIND/commit state -> receipt/manifest. It is proof over the existing authorization architecture, not a second authorization engine.

Controlled Full Seam - 22/22

Status PASS | Maturity L4_ROUTE_ENFORCED | Scope CONTROLLED_SINGLE_ROUTE_ONLY | Production enforcement asserted: False

Full Goal 3 Code-Now Acceptance - 15/15

A CODE_NOW PASS means the required implementation predicate passed. It does not convert honest current-run insufficiency, pending citations, controlled-only proof, or missing customer topology into positive evidence.

ID	Requirement	Acceptance	Current-run surface
G3-CODE-01	Single canonical authority and projection roles	PASS	VALID
G3-CODE-02	Canonical typed proposed state transition	PASS	COMPLETE
G3-CODE-03	Decision-causal evidence enforcement, fail-closed insufficiency and domain purity	PASS	PARTIAL_WITH_REASON
G3-CODE-04	Execution boundary and no-bind proof	PASS	WITHHELD_PENDING_REVIEW
G3-CODE-05	Native current-run agent identity and honest arbitration	PASS	COMPUTED_CURRENT_RUN_NATIVE_AGENT_ARBITRATION
G3-CODE-06	Trust, risk, uncertainty and Section 45 truth	PASS	SECTION45_METRIC_TAXONOMY_AT_TACHED
G3-CODE-07	Controlled Full Seam full-audit authority or exact buyer compact projection	PASS	PASS
G3-CODE-08	Knowledge-asset identity and integrity	PASS	COMPLETE

G3-CODE-01: One authoritative Decision API; projections and diagnostics do not override ALLOW/BLOCK/ESCALATE.

G3-CODE-02: Typed proposed state transition is COMPLETE, VALID, frozen before decision, and carries a movement hash.

G3-CODE-03: Acceptance PASS is fail-closed truth: current evidence authority is PARTIAL_WITH_REASON; no missing evidence is fabricated and autonomous release stays withheld.

G3-CODE-04: Gate ran before release; autonomous release was refused; downstream commit is NOT_COMMITTED and no protected effect formed.

G3-CODE-05: Three native current-run agents executed (Compliance, Accuracy, Risk); arbitration is explanatory/non-decisioning and does not mutate Decision API truth.

G3-CODE-06: Output-reliability trust, decision-basis trust, arbitration, risk, uncertainty and Cold/Heat/Mercury are separately typed; no score is silently repurposed as authorization.

G3-CODE-07: Controlled Full Seam retains exact 22-record full-audit authority and passed 22/22; L4 applies only to the bounded controlled route.

G3-CODE-08: Eight knowledge assets are identified with no missing decision-driving identities; raw indexes/embeddings and absolute paths are not exported.

Full Goal 3 Code-Now Acceptance - continued

ID	Requirement	Acceptance	Current-run surface
G3-CODE-09	Schema, strict-six, receipt, manifest and hash parity	PASS	FINALIZATION_COMPLETE
G3-CODE-10	Buyer/full/PDF/frontend authority separation	PASS	VALID
G3-CODE-11	Proof harness customer-free dimensions	PASS	STRUCTURAL_PASS_WITH_WEAK_DIMENSIONS
G3-CODE-12	Matrix/heatmap citation semantics parity	PASS	COMPLETE
G3-CODE-13	Evidence geodesic domain purity or honest insufficiency	PASS	INSUFFICIENT_DOMAIN_PURE_GRAPH
G3-CODE-14	Bounded compaction and no-loss full-audit authority	PASS	BUYER_COMPACTED_FULL_AUDIT_RICH_EVIDENCE_RETAINED
G3-CODE-15	Measured runtime performance lifecycle	PASS	NOT_ATTACHED_WITH_REASON

G3-CODE-09: Artifact finalization is complete and strict-six readiness is true with receipt/manifest/hash parity.

G3-CODE-10: Buyer, full-audit, PDF and frontend projections remain role-separated from canonical authorization authority.

G3-CODE-11: Customer-free proof harness is structurally verified with weak dimensions honestly disclosed; it does not claim autonomous-release readiness.

G3-CODE-12: Nine canonical compliance rows maintain matrix/table/heatmap/overview parity without decision or release mutation.

G3-CODE-13: No defensible current-run domain-pure graph path existed; status is INSUFFICIENT_DOMAIN_PURE_GRAPH and no path was fabricated.

G3-CODE-14: Buyer projection is compacted while the full audit retains rich evidence; mapped evidence and citation linkage remain distinct.

G3-CODE-15: Acceptance PASS preserves measured runtime truth without inventing missing phases: actual LLM wall-time is captured, while formal all-phase timing authority is NOT_ATTACHED_WITH_REASON.

Latest Run Governance Metrics - Section 45 Truth

Metric	Current run	Role / meaning
Output-Reliability Trust	71.07%	Decision input; not authorization
Decision-Basis Trust	58.92%	Decision output/support
Presented Governance Trust	58.92%	Presentation only
Native Arbitration	73.28%	Audit/explanatory; not trust
Autonomous Release Confidence	0.00%	0 because autonomous release withheld
Decision Routing Confidence	PENDING	Canonical metric remains pending
Unified Uncertainty	PENDING	Canonical metric entry remains pending

Native current-run arbitration

3 agents executed: ComplianceAgent 78.50, AccuracyAgent 67.89, RiskAgent 70.99. Arbitration 73.28%. Decision role: EXPLANATORY_NON_DECISIONING_NATIVE_AGENT_ARBITRATION; Decision API mutated: False.

Cold / Heat / Mercury

Cold	100.00%	COMPUTED_WITH_NA_NORMALIZATION
Heat	50.12%	NATIVE_CURRENT_RUN_MEASURED; missing divergence_unit
Mercury	33.33%	missing cross_scope_alignment_unit

Risk / uncertainty / benchmark

Domain inherent risk: Moderate (35.0). Residual release risk: Low (0.0) because release was withheld. Uncertainty posture: high, 67.0% routing floor. Internal synthetic reference corpus: 19th percentile, n=150, required threshold None; strict pass is false/review required.

Evidence, Reproducibility and Runtime Truth

Surface	Current run
Decision-causal evidence	PARTIAL_WITH_REASON
Mapped evidence	9
Citation linkage	0/9 linked; 9 pending (0.0%)
Evidence geodesic	INSUFFICIENT_DOMAIN_PURE_GRAPH; PASS_BY_HONEST_DEGRADATION; path_count=0
Knowledge assets	COMPLETE; 8 assets; missing decision-driving IDs=0
Compliance surfaces	COMPLETE; 9 rows; parity=True
Proof harness	STRUCTURAL_PASS_WITH_WEAK_DIMENSIONS / STRUCTURALLY_VERIFIED_EVIDENCE_QUALITY_PARTIAL
Artifacts	FINALIZATION_COMPLETE; strict-six ready=True
Formal phase timing	NOT_ATTACHED_WITH_REASON
Measured LLM inference	16816 ms
Artifact finalization	62867 ms

These results deliberately retain partial/pending states. Code-now completion means the required behavior and truth-preserving contracts passed; it does not mean the current synthetic event has complete citations, a domain-pure rationale path, all formal per-phase timings, reviewer closure, or customer-production topology evidence.

Goal 3 Sections 46-54 - Additive North Star Capabilities

Section	Capability	Current-run status
46	R7 Intent Horizon - Persistent Intent-to-Action Governance	COMPUTED
47	R7 Persistence, Replay, and Portable Proof	BOUNDED_TRAJECTORY_HASH_CHAIN_ATTACHED
48	Full Semantic Curvature - Longitudinal Governance Intelligence	INSUFFICIENT_HISTORY
49	R7 and Semantic Curvature Proof, Presentation, and North Star Acceptance	PASS_WITH_SINGLE_EVENT_HISTORY_LIMIT
50	Governing Basis Continuity and Lawful Continuation	ESTABLISHED_CURRENT / INITIAL
51	Source Authority, Capability Authority, and Evidence Custody	CURRENT_EVENT MIXED_NOT_APPLICABLE_OR_INSUFFICIENT
52	External Runtime-State Attestation and Substrate Independence	NOT_ATTACHED_NOT_REQUIRED_BY_POLICY
53	Consequence Custody and Governed Non-Formation	NO_BIND_PROVEN
54	Governing Continuity, Authority, Custody, and Runtime-State North Star Acceptance	PASS_WITH_PRODUCTION_BOUNDARY_RETAINED

§46: Immutable original intent is compared to the current proposed action using semantic distance before Decision API authorization.

§47: A bounded one-event trajectory, horizon identity and hash chain are attached; raw embeddings are not exported.

§48: The capability is implemented; this single event has only 1 eligible record against a 3-record minimum, so no trend is fabricated. Governance Spectrum is likewise insufficient-history.

§49: R7 and portfolio intelligence remain distinct; ordinary batch membership is not treated as one R7 trajectory or longitudinal history.

§50: The governing basis is frozen and current; a fresh Decision API decision is still required and CONTINUABLE never means standing authorization.

§51: Retrievable source and callable tool are not treated as authority. Current case source/capability checks are not applicable where not required; overall authority completeness remains insufficient.

§52: Runtime-state attestation is supported as a bounded pre-decision input but does not independently authorize release or become a surrogate trust/risk/R7 score.

§53: The exact movement, governing basis, frozen input, Decision API result, execution boundary and no-bind proof are hash-bound through receipt and manifest.

§54: The additive capabilities strengthen the same Decision API and strict-six evidence architecture; customer-production L5 remains topology/evidence dependent.

North Star boundary

All added capabilities strengthen one Decision Authorization architecture. The Decision API remains the sole ALLOW/BLOCK/ESCALATE authority. Current-event evidence, controlled-fixture L4 evidence, and customer-production L5 evidence are separate.
