

OntoGuard Public Proof - Sellable Lite

Latest accepted synthetic controlled run | Full Goal 3 code-now context

Decision	ESCALATE
Release	WITHHELD_PENDING_REVIEW
No-bind	NO_PROTECTED_EFFECT_FORMED
Current event	L1_PLUS_EVENT_GOVERNED_NO_BIND_PARTIAL
Controlled Full Seam	PASS - 22/22 - L4_ROUTE_ENFORCED
Production L5	NOT ASSERTED - customer topology evidence required

Goal 3 code-now: COMPLETE - 15/15

Latest-run score truth

Output-Reliability Trust	71.07%
Decision-Basis Trust	58.92%
Native Arbitration	73.28% - explanatory, not trust
Cold / Heat / Mercury	100.00% / 50.12% / 33.33%
Uncertainty posture	High - 67% routing floor; canonical unified metric remains PENDING
Benchmark	19th percentile / 50 required; n=150 synthetic internal corpus

Three native current-run agents

ComplianceAgent 78.50 | AccuracyAgent 67.89 | RiskAgent 70.99. Their arbitration is explanatory/non-decisioning and does not replace or mutate the Decision API.

Honest current-run limitations

Decision-causal evidence: PARTIAL_WITH_REASON. Citation linkage: 0/9 linked, 9 pending. Evidence geodesic: INSUFFICIENT_DOMAIN_PURE_GRAPH with no fabricated path. Formal all-phase timing authority: NOT_ATTACHED_WITH_REASON, while actual LLM inference time is captured at 16,816 ms. Semantic Curvature and Governance Spectrum: INSUFFICIENT_HISTORY (1 eligible record; minimum 3).

Sections 46-54

R7 Intent Horizon, R7 replay/portable proof, Semantic Curvature, Governance Spectrum, Governing Basis Continuity/Lawful Continuation, Source & Capability Authority, Evidence Custody, external runtime-state attestation/substrate independence, Consequence Custody, and North Star acceptance are implemented. These strengthen one authorization architecture; they do not create parallel decision authorities.

Public proof boundary

This is a public-sanitized projection of synthetic controlled evidence. It does not claim customer validation, real production non-bypassability, reviewer closure, or production L5. The private canonical strict-six remains authoritative.
