

OntoGuard Layer Facts - Current Goal 3 Public Summary

What the latest accepted run proves - and what it does not

Layer	Current proof truth
Decision Authorization	One authoritative Decision API returned ESCALATE; autonomous release withheld.
Intent	R7 COMPUTED before decision; semantic distance 0.331311; warning threshold exceeded; no prohibited boundary crossed.
Governing Basis	ESTABLISHED_CURRENT; fresh decision required; lawful continuation is not standing authorization.
Authority / Custody	Source/capability/custody contracts implemented; current event retains not-applicable/insufficient states where appropriate.
Consequence	NO_BIND_PROVEN; downstream NOT_COMMITTED; protected effect false.
Current-event maturity	L1_PLUS_EVENT_GOVERNED_NO_BIND_PARTIAL / shadow proof.
Controlled seam	PASS 22/22; L4_ROUTE_ENFORCED for bounded controlled route only.
Production L5	Not asserted; requires customer topology/endpoint evidence.
Goal 3 code-now	COMPLETE 15/15 with evaluated predicates; honest insufficiencies remain visible.
Section 45 metrics	Output trust 71.07%; decision-basis trust 58.92%; native arbitration 73.28%; Cold/Heat/Mercury 100/50.12/33.33.
Native arbitration	3 current-run agents: Compliance 78.50, Accuracy 67.89, Risk 70.99; explanatory/non-decisioning.
Benchmark	19th percentile vs 50 required, n=150 synthetic internal reference corpus; not passed/review required.
Evidence / citations	9 mapped evidence rows; 0/9 citation-linked, 9 pending; fail-closed honesty preserved.
Longitudinal intelligence	Semantic Curvature and Governance Spectrum implemented but INSUFFICIENT_HISTORY for this single event.

Sections 46-54

Implemented: R7 persistent intent-to-action governance; R7 persistence/replay/portable proof; Semantic Curvature and Governance Spectrum; governing-basis continuity and lawful continuation; source/capability authority and evidence custody; external runtime-state attestation/substrate independence; Consequence Custody; and additive North Star acceptance.

Interpretation rule

“Goal 3 complete” means the code-now predicates passed. It does not mean this synthetic event has complete citations, sufficient longitudinal history, reviewer closure, or production-wide L5/non-bypassability evidence.
